3rd INTERNATIONAL CONFERENCE on INTEGRATED NATURAL RESOURCES and ENVIRONMENT MANAGEMENT (INREM 2021) 17 to 19 November 2021

Online Platform

Theme: Advancing Ecosystem Restoration, Resilience and Sustainable Development Through INREM

To register for the 3-day webinar, please visit https://bit.ly/INREMIntlConferenceReg

Rationale

Sustainable management of natural resources and environment is one of the greatest challenges in the 21st century and beyond, particularly in the face of global change. At the core of achieving sustainable development is good governance, along with economic development, social inclusion, environmental sustainability, and peace and security.

The United Nations Decade on Ecosystem Restoration has been declared for 2021-2030. It recognizes that healthy ecosystems sustain life on earth. A global rallying cry to heal our planet, it aims to prevent, halt and reverse the degradation of terrestrial and aquatic ecosystems.

Resilience provides the missing link in sustainable development. Human activities significantly affect ecosystem resilience leading to the loss of biological diversity, land degradation, exploitation of marine ecosystems, emissions of pollutants and climate change.

In this conference, experiences in ecosystem restoration, resilience-building and sustainable development through INREM will be shared among academics, researchers, and practitioners (i.e. LGUs, NGOs) in environment and natural resources management.

Objectives

The third International Conference aims to:
1. facilitate sharing of ideas and experiences on ecosystem restoration, resilience-building and sustainable development of natural resources in the Asia-Pacific region;
2. synthesize knowledge on integrated natural resources and environment management (INREM) of lake and river basins, landscapes and seascapes, small islands, and rural-urban areas and their interrelationships; and,
3. establish networks and Communities of Practice on INREM in the Asia-Pacific region.
